

Section 9.2

DATA **Unemployment Rate** In Exercises 9–12, use a spreadsheet and the line graph shown.

- What are the mean, median, and mode of the data presented in the line graph?
- Which measure of central tendency best describes the average of the data? Explain your reasoning.
- Which two data values are outliers?
- Do the outliers have a greater effect on the mean or the median? Explain your reasoning.
- Box-and-Whisker Plot** Use the box-and-whisker plot to analyze the unemployment rates.

- Histogram** Explain whether the following statement is supported by the histogram: “The unemployment rate during most years is between 4.0% and 7.0%.”
